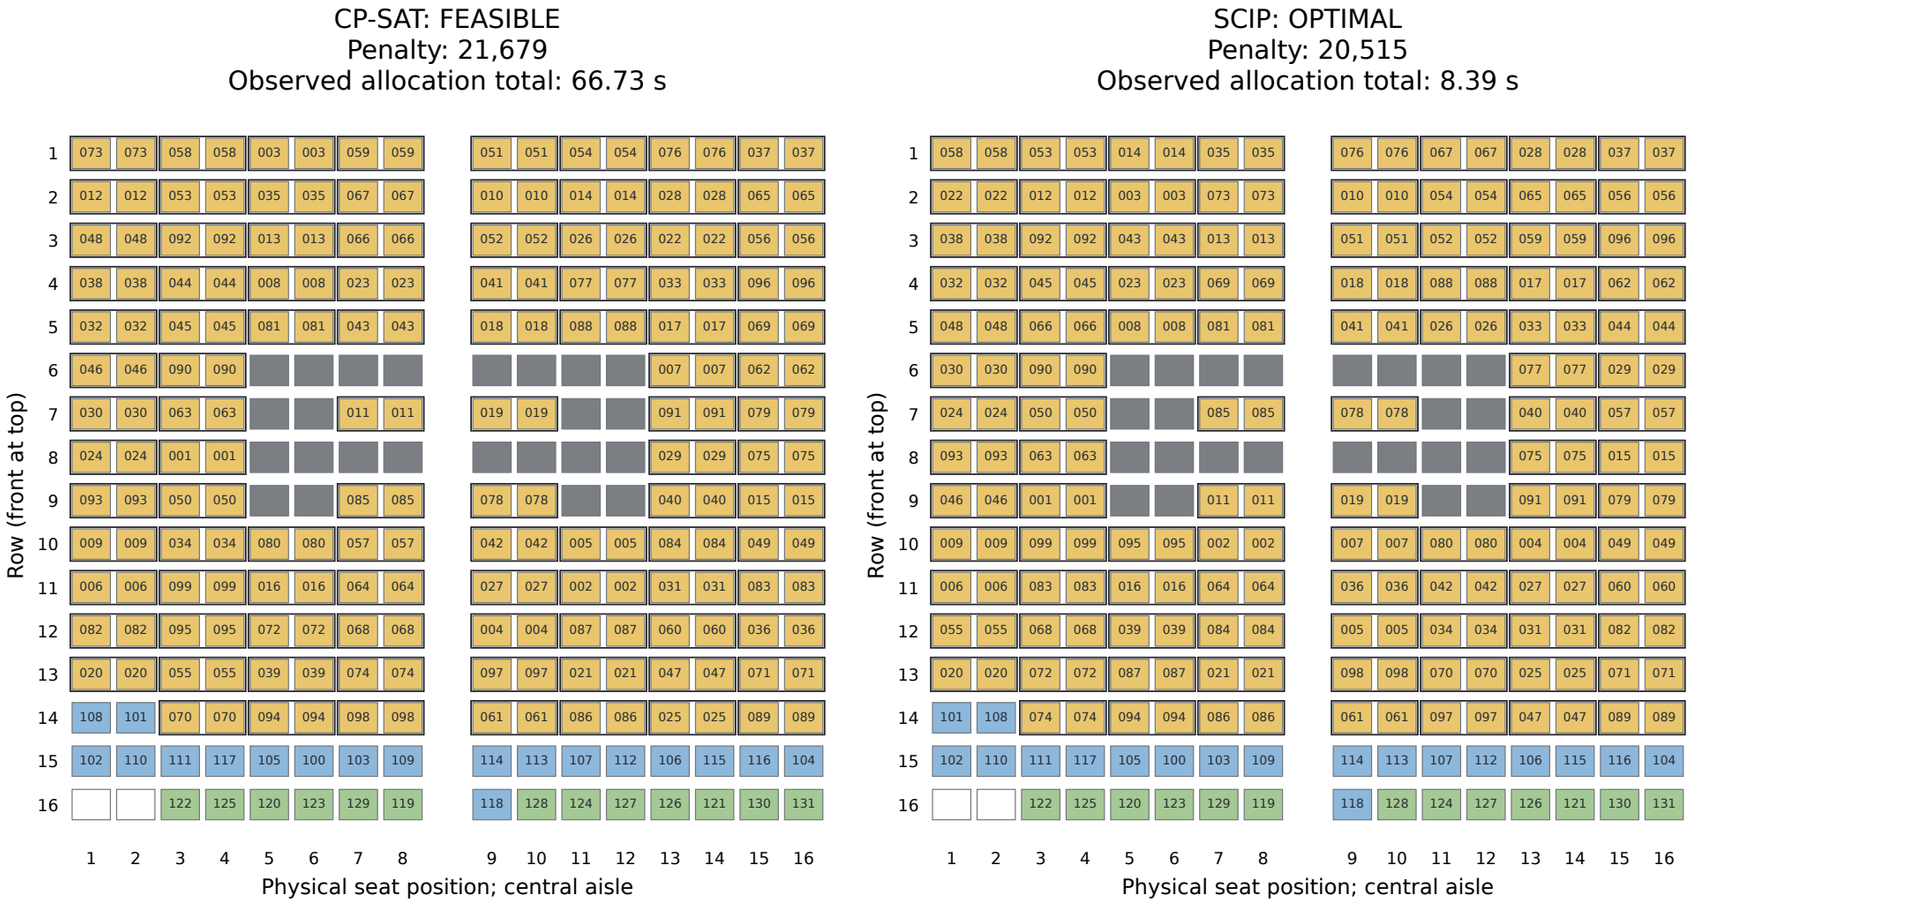
Study A | The 230-seat event at a common 60-second search allowance

99 Emperor registrations (198 seats), 19 Merit and 13 Bodhi; 131 registration units; current preference order



Identical controlled settings: one worker; no canonicalization; fresh 60-second searches. CP-SAT remained feasible without proof; SCIP proved the minimum. Greedy returned no map. Registration numbers identify placements, not preference quality.
